

Quick Tips for Touch Typing

- **Find the Home Row:** Rest your left fingers on A, S, D, F and your right fingers on J, K, L, ;. Use the bumps on the 'F' and 'J' keys to find your position without looking.
- **Eyes on the Screen:** Avoid looking down at your hands. It's slow at first, but this is the most important rule!
- **Use the Right Finger:** Each finger is responsible for a set of keys. Always use the correct finger to strike each key.
- **Always Return Home:** After pressing any key, immediately bring your finger back to its starting position on the home row.
